What is iStocks?

iStocks is India's first **AI-native trading intelligence platform** powered by an expert system of AI agents. It enables retail investors to analyze stocks, build trading strategies, and make informed investment decisions using **natural language**, in English and all Indian regional languages.

Core Value Proposition

"Ask a question in plain Hindi. Get institutional-grade analysis. Build and deploy algo strategies. No coding. No jargon. Just intelligent investing."

Key Features

Feature	Description
 AI Stock Analyst	Powered by Angle 3.0 , a collection of expert AI agents. Ask "How is Reliance performing?" and receive detailed technical + fundamental analysis with actionable insights.
 40+ Technical Indicators	RSI, MACD, Bollinger Bands, EMA, SMA, ADX, OBV, Stochastic Oscillator, ATR, CCI, Williams %R, ROC, and more, computed in real-time on live NSE/BSE data.
 Sangraha (Strategy Repo)	"Sangraha" (Sanskrit for collection), a community-driven strategy repository. Create, backtest, fork & share trading strategies. A GitHub for algo trading.
 Trading Agent	Intelligent trading agent that can analyze market conditions, identify entry/exit points, and execute trades automatically based on your strategy parameters.
 Regional Language NLP	Full support for Hindi, Tamil, Telugu, Marathi, Bengali, and all Indian languages. First trading platform to truly serve <i>Bharat</i> .
 Web + Android	Live at istocks.codes and as an Android APK. Will soon be deployed on Google Play Store.

How Angle 3.0 Works

Angle 3.0 is our proprietary collection of specialized AI agents that work together to deliver institutional-grade analysis:

- **Analysis Agent:** Processes 40+ technical indicators and identifies patterns, trends, and signals in real-time.
- **Strategy Agent:** Builds, backtests, and optimizes trading strategies based on user preferences.
- **Trading Agent:** Monitors markets and executes trades automatically at optimal entry/exit points.

- **Language Agent:** Translates all interactions into the user's preferred Indian language seamlessly.
- **Risk Agent:** Evaluates portfolio risk, sets stop-losses, and protects users from emotional trading.

Total Addressable Market (TAM)

Market Opportunity

India’s retail investment landscape is at an **inflection point**, creating a once-in-a-generation opportunity:

Total Addressable Market
Indian Retail Trading Market
80,000+ Crore
by 2027 (20% CAGR)

Active Demat Accounts
Growing Rapidly
15 Crore+
3× growth in 5 years

Algo Trading Penetration
Currently Low in Retail
Only 5%
vs 70% in US (huge gap)

Market Size Breakdown

Metric	Details	Value
TAM	Indian retail trading market (equity, derivatives, MF)	80,000+ Cr
SAM	Tech-savvy active traders open to AI & algo tools	12,000+ Cr
SOM	Early adopters, first 500K users in Year 1	500+ Cr
India Algo Trading Market (2025)	Institutional + Retail algo trading	USD 615M
Projected Market (2030)	Growing at 25%+ CAGR	USD 2.3 Billion
Demat Accounts	Total accounts in India (2025)	15 Crore+
Retail Algo Penetration	India vs US benchmark	5% vs 70%

Whom Are We Building For?

Target audience: The next **100M+ Indian investors** who are:

- **Young (18 to 35):** Post-COVID wave of first-time investors. Comfortable with mobile apps and AI.
- **Tier 2/3 Cities:** 750M+ smartphone users beyond metros. Untapped, hungry for financial tools.
- **Regional Language Speakers:** 90% of Indians prefer content in their local language. No trading platform serves them.
- **New Investors (<2 years):** 50% of demat holders are new. They need guidance, not complexity.

User Personas

 Anshuman, 26	Part-time trader. Never tried algo trading because it required coding, building infra, and it is extremely tough. Wants a no-code solution.
 Huda, 22	Working at HPCL. She doesn't have the time to watch charts and find the exact moment to trade at the exact time. Needs automation.
 Nikhlesh, 22	Working at Petronet. Understands the market well but doesn't know how to automate the process with very low latency and execute trades automatically even during his working hours.
 Chetan, 24	Working at a quant firm. His opinion: "Making this platform will be very helpful for retail traders. Right now backtesting ideas is so tough, but after this they can literally give a fight."

Why Now? Market Tailwinds

1. **Retail Trading Boom:** 15 Cr+ demat accounts, 3× growth in 5 years, young mobile-first audience.
2. **SEBI Algo Regulation (Oct 2025):** New framework legitimized retail algo trading, moved from grey area to regulated activity.
3. **AI Inflection Point:** LLMs and AI agents make conversational finance analysis possible for the first time.
4. **Regional Language Gap:** 90% of Indians prefer local language. Zero trading platforms offer NLP in regional languages.
5. **Low Penetration:** Algo trading is only 5% of Indian retail vs 70% in US. Massive room to grow.

Ease of Product Adoption

Will 100M+ Indians actually adopt this product? Yes, and here’s why:

Zero Learning Curve

Conversational AI

The chat interface is the product. Every Indian who uses WhatsApp already knows how to use iStocks. Just type a question, “How is Reliance doing?”, and get a professional analysis. No charts to learn, no buttons to find, no jargon to decode.

Five Pillars of Adoptability

	Pillar	Why It Drives Adoption
	Conversational AI	No learning curve. Like texting a stock expert friend. Ask in plain language, get analysis in seconds.
	Regional Languages	Hindi, Tamil, Telugu, Marathi & more. First platform to serve Bharat, not just India’s English-speaking 10%.
	Free to Start	Zero cost barrier. Freemium model lets anyone try before committing. No credit card needed.
	Web + Android	Available at istocks.codes and as Android APK. Will soon be on Play Store. Share via WhatsApp link. Works on low-end phones.
	Speed to Value	Under 30 seconds from first visit to first AI insight. No signup needed for basic analysis.

Revenue Model

iStocks has a **two-phase revenue strategy** designed for sustainable, scalable growth:

Revenue Stream 1: Subscription Plans (Immediate)

This is our **primary revenue driver from Day 1**. Users pay for premium AI features, advanced analysis, and algo deployment.

Tier	Price	Includes
Free	0/month	Basic AI chat (limited queries), 5 stock dashboards, community access
Pro	299/month	Unlimited AI queries, 40+ indicators, priority response, Sangraha access
Elite	999/month	Algo deployment, backtesting, expert network, API access, premium strategies

Revenue Stream 2: Becoming a Broker (Year 1+)

Right now, we will earn only through subscriptions. However, after one year of building trust, user base, and regulatory compliance, **iStocks will become a registered broker**. This will unlock brokerage commissions on every trade executed through our platform.

Why this matters: Brokerage revenue at scale is the **largest revenue driver** in the Indian fintech space. Zerodha (8,320 Cr), Angel One (4,275 Cr), and Groww (3,145 Cr) all earn the majority of their revenue from brokerage. By becoming a broker, iStocks transitions from a SaaS tool to a **full-stack financial platform** with compounding revenue.

Industry Standard: 20 per executed order or 0.03% of turnover.

Revenue Stream 3: Strategy Marketplace

Premium strategies on Sangraha where creators earn and the platform takes a **15 to 20% cut**.

Expert Network: Verified traders manage portfolios for followers via a **profit-sharing model**.

Moat: Why iStocks Will Win

Competitive Landscape

Feature	Zerodha	Groww	Angel One	TradingView	Streak	iStocks
AI Chatbot	✗	✗	✗	✗	✗	✓
Regional NLP	✗	✗	✗	✗	✗	✓
No-Code Bots	✗	✗	✗	✗	Partial	✓
Strategy Repo	✗	✗	✗	Ideas	Partial	✓
Trading Agent	✗	✗	✗	✗	✗	✓
40+ Indicators	Kite	✗	Basic	✓	Basic	✓
Revenue (FY24)	8,320 Cr	3,145 Cr	4,275 Cr	\$250M	50 Cr	Pre-Rev

Key Insight: No existing player combines **NLP + AI agents + regional languages + strategy marketplace**. We are creating a new category.

Five Pillars of Defensibility

Our Moat is a Compounding Advantage

- 1. First Mover in NLP Trading:** No Indian platform combines NLP + AI trading agents + regional language support. We define the category and set the standard.
- 2. Data Network Effects:** Every user query makes our AI smarter. More users = better recommendations = more users. Classic flywheel effect that becomes harder to replicate over time.
- 3. Community Strategy Repository (Sangraha):** User-generated strategies create content lock-in. Fork, backtest, deploy, like GitHub for trading. This grows organically and is nearly impossible to replicate.
- 4. Regional Language Lock-in:** 90% of India doesn't use English daily. Once a user experiences intelligent stock analysis in Hindi or Tamil, switching to an English-only platform is painful.
- 5. AI Agent Ecosystem:** Expert Network + Bot Marketplace creates two-sided marketplace dynamics. Experts earn by sharing strategies, users profit by following them. *Everyone stays*.

What Could Cause Failure and Mitigation

Risk Analysis

Risk 1: Execution Risk

Threat: Not iterating fast enough, losing momentum against well-funded incumbents like Zerodha or Groww.

Mitigation: Relentless execution cadence. Ship weekly. Stay lean and founder-led. **Hard work is the only answer**, and the founding team is committed to outworking everyone.

Risk 2: Regulatory Risk

Threat: SEBI tightens algo trading rules or bans retail algo APIs.

Mitigation: Compliance-first approach from Day 1. Partner exclusively with SEBI-registered brokers. Stay within regulatory sandbox. The Oct 2025 SEBI framework actually *legitimized* retail algo trading.

Risk 3: Big Player Entry

Threat: Zerodha or Groww launches their own AI chatbot feature.

Mitigation: Speed of innovation is our weapon. NLP in regional languages + community strategy repo + AI agent ecosystem is a *platform*, not a feature. Hard to replicate quickly. First-mover data advantage compounds.

Risk 4: AI Hallucination / Trust

Threat: AI gives incorrect stock advice leading to user losses and trust erosion.

Mitigation: Ground AI in real data: 40+ technical indicators, live prices, historical trends. RAG pipeline with verified data sources. Mandatory disclaimers. Transparency via “show me the data” feature.

Risk 5: Market Downturn

Threat: Bear market reduces retail trading volumes and user interest.

Mitigation: Expand product beyond equities to mutual funds, FDs, gold, and government bonds, covering **short-term and intermediate-term investments**. iStocks becomes a comprehensive wealth platform, not just a stock tool.
