Our Solution: Natural **Language** Trading Platform

iStocks transforms complex trading strategies into simple conversations. Our multi-agent AI system converts natural language commands into precise trade execution with built-in risk management.

Prompt: "Use Bollinger Bands – when stock touches upper band, short sell 150 RELIANCE stocks in Intraday with stop-loss at 5%"

Voice Commands

Speak your trading strategy in your regional language

AI Processing

Multi-agent system interprets and validates strategies

Risk Management

Automatic stop-loss, position sizing and Paper Trading option

How **iStocks** Works: The **AI**-Powered Trading Flow

Below is the backend flow of iStocks, showing how our trading platform will analyze the prompt and execute certain steps before final execution

Natural Language Prompt

Users simply type their trading intent, like "Buy 100 Reliance stocks when RSI drops below 30."

Trading Analysis Agent

Our AI interprets the prompt, analyses market conditions, and formulates a precise trading strategy.

Watching Agent

The system continuously monitors the market for the specified conditions (e.g., RSI dropping below 30).

Automated Execution

Once conditions are met, the trade is automatically and instantly placed, adhering to the defined strategy.

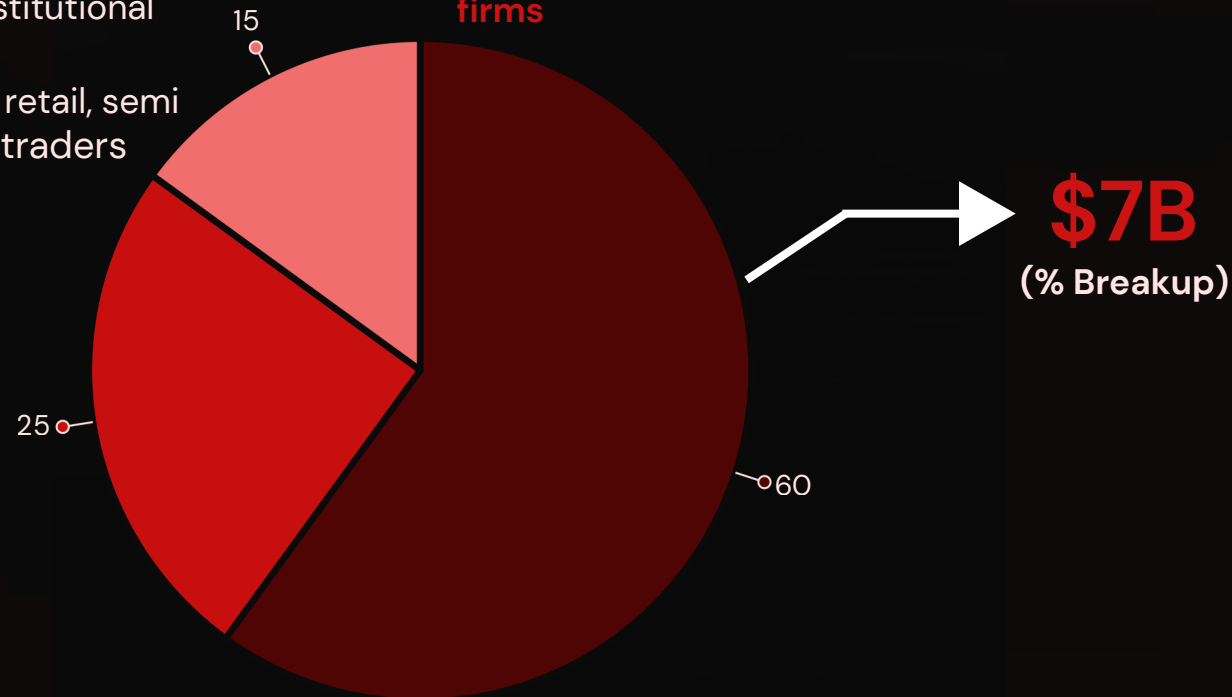

Massive **Market** Opportunity
